Shrink Films

Print

St. Louis paper is proud to represent **Bolloré Group's Bolphane®** line of **shrink films**, manufactured in Connecticut in a state-of-the-art, ISO9002 registered, manufacturing plant that is rated "Superior" by the American Institute of Baking (AIB). With 30 years of experience producing thin films in the United States, Bolloré has the technology and capacity to provide a wide variety of shrink films suitable for almost any application on any piece of equipment. All Bolloré Bolphane® shrink films meet US FDA and Health Canada regulations for direct food contact. Tell us about your application and we will work with you to determine the best film for you. **(See the FAQ's for information about determining proper film widths)**

Bolloré

Bolphane® BX film is Bolloré's **most economical multipurpose** shrink film. This multi-layer polyolefin film has high shrink force and excellent stiffness and flatness. These properties, combined with wide seal and shrink temperature ranges, make **BX** ideal for high speed and multi-packing applications. **BX** is available in 50, 60, 75, and 100 gauges in both singlewound and centerfold rolls.

Bolphane® BY film is a **high performance** shrink film. The 5-layer polyolefin film seals quickly and has a high degree of shrink at low temperatures. With its excellent hot slip, wrapped product is easily packed as it exits from the shrink tunnel. **BY** film performs well on irregularly shaped packages wrapped on a wide range of equipment and is ideal for retail presentation. **BY** is available in 50, 60, 75, and 100 gauges in both singlewound and centerfold rolls.

Bolphane® BZ film is a **tough multipurpose cross-linked** polyolefin shrink film. Cross-linking provides enhanced toughness and a broad operating range making it suitable for a wide range of machines and applications. **BZ** is available in 50, 60, 75, and 100 gauges in both singlewound and centerfold rolls.

Bolphane® BRX is a **cross-linked film with low shrink force** (won't bend flexible items) and very high free shrink (shrinks around odd shapes). These features, combined with excellent toughness, make **BRX** ideal for wrapping small stacks of printed materials or soft and/or irregularly shaped items. **BRX** is available in 45, 50, 60, and 75 gauges in both singlewound and centerfold rolls.

Bolphane® BHE is a multi-layer, **high efficiency** polyolefin shrink film. The film is manufactured from high performance polymers, giving it very good optics, low shrink energy with the highest available free shrink, quick sealing and good hot slip. These characteristics make **BHE** especially suitable for high-speed automatic wrappers and/or heat sensitive products. **BHE** is available in 44 gauge singlewound or centerfold films.

Bolphane® BLG is a **high yield, low gauge cross-linked** polyolefin shrink film. **BLG** combines material savings, abuse resistance and production efficiencies with exceptional shelf appeal. Bollore's cross-linking technology makes this film very forgiving under a wide range of equipment conditions. **BLG** is available in 45 gauge singlewound or centerfold films.

Bolphane® BFF is a multi-layer polyolefin film with **anti-fog properties** for superior gloss and clarity under humid conditions. **BFF** is ideal for wrapping fresh or frozen food products where condensation is an issue. **BFF** is available in 60 gauge singlewound or centerfold films.
